

Agenda of the lecture -

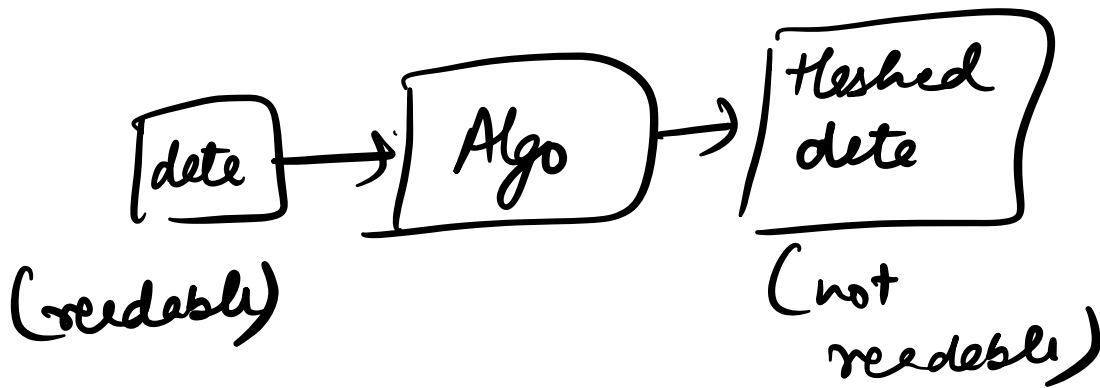

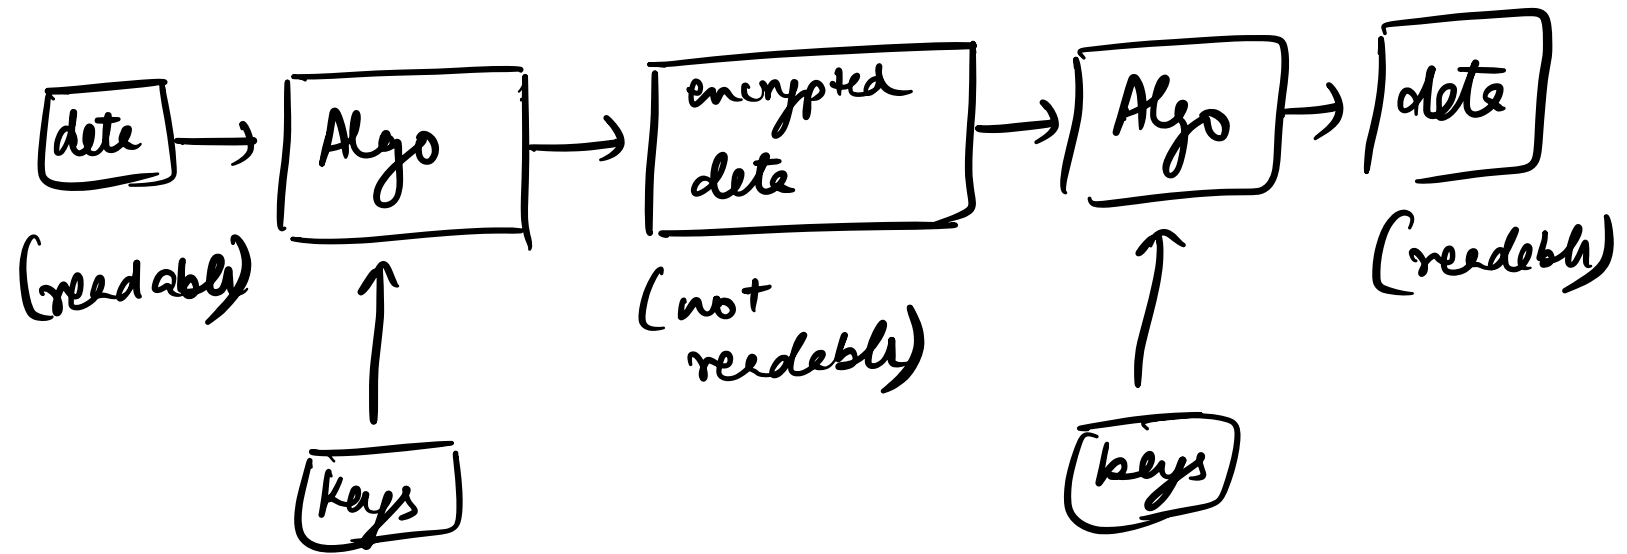

- Setting up a full-stack application
- Boilerplate of client-side code
- Authentication

↳ encryption vs hashing

3p Libraries :-

- 1) antd : readymade react UI templates
- 2) express : to create backend server
- 3) mongoose : to interact with mongo DB.
- 4) dotenv : to create/use environment variables
- 5) bcrypt : hash passwords/any confidential data

Encryption vs Hashing.
